

**Solar Shading Systems®**

**Roman Shades** are fabricated with uniform fabric panels 12" in height and up to 168" +/- in width. Individual fabric panels are assembled with the Shade Spline® process for strength and durability. All fabrics are railroaded (turned 90°), slit-to-width and cut-to-length, eliminating fabric waste. No sewing is used in the manufacturing process. Shades hang straight and true, and stack in a

**Easy Rider Lift Assist:** 2-to-1 mechanical advantage with clutch release on standard headrail (3-to-1 with heavy-duty system). Units can be positioned at any height and are level at all times.

**Features:**

- SSS light-filtering sunscreen collection with permanently flame-resistant, vinyl-coated, polyester yarn, anti-microbial, anti-bacterial, washable, with 1% to 15% openness options
- 2-to-1 lift-assist with clutch release standard; 3-to-1 lift-assist with heavy-duty system
- Single shade bands to 168" wide (192" with heavy-duty headrail)
- Shade heights to 144" +/- (50 s.f. +/-) with standard headrail; 180" +/- (100 s.f. +/-) with heavy-duty headrail.

## ROMAN SHADES

Classic Roman Shades feature our Shade Spline\* fabrication technique. Individual shade bands are joined together in the Shade Spline allowing for wider shades up of to 192". Screens are slit into the desired panel width (normally 12"), then turned 90 degrees and inserted into the Shade Spline.

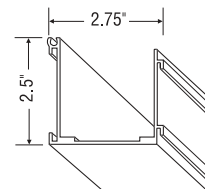

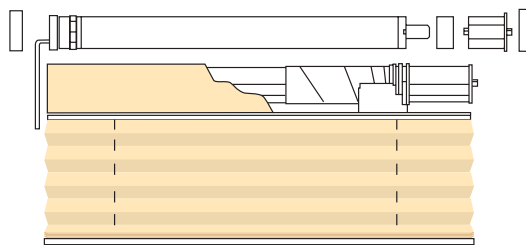

Operating hardware is self-valanced for a clean, tailored appearance, and features a 2-to-1 advantage clutch control for each opening. Components are concealed within the headrail for enhanced aesthetics. Heavy-duty systems and motorization options are also available.

Roman Shades with the Shade Spline\* fabrication system are available in single shades to 192" wide. This treatment is ideal for residential, hospitality, healthcare, and commercial environments.
