

SSS•8000 Heavy-Duty Roller Hardware with equalized spacer links to facilitate desired fullness. Cord retainer keeps cords inside track. Lengths to 192" with channel colors of black, bronze, white and aluminum standard; straight sections only.

SSS•8000 features minimum stacking requirements of 15% to 18% of opening. Roller bearing end pulleys for ease of operation.

SSS•8027 Snap Swivel Carrier with Delrin or stainless steel spacer links. Trouble-free roller carrier design.

SSS•8090 Wall Bracket with 3" to 4" projection, face of track to wall. Snap-in positive attachment.

Z SOLAR DRAPERY™

Z Solar Drapery* is a unique and innovative concept that applies advanced sunscreen technology to a traditional style of drapery treatment. By enabling the flat sunscreen material to drape in uniform folds, the Z Drape can be utilized as a virtually flat sunscreen drapery or with pre-determined accordion style fullness. The accordion or pleated style offers a number of fullness options, depending on pleat size and carrier spacing, on the SSS•8000 Roller Hardware System.

Accordion style with fullness added to Z Drape. 2 to 2½ times fullness can be added in various pleat sizes from 4" to 6" wide.

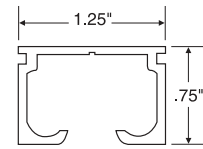

ACCORDION STYLE is fabricated with uniform pleats consistently spaced at desired intervals. The solar protection qualities of the sunscreens are enhanced with the extra fullness.

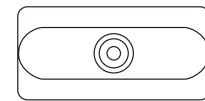

Z Solar Drapery also offers a flat sunscreen alternative. The flat technique provides a virtually clear view through the sunscreen, using either the SSS•8000 or SSS•2500 Roller Hardware Systems. For added convenience, curved, straight and over-sized applications can also be accommodated with the same hardware systems.

Accordion style or flat, Z Solar Drapery offers an opportunity to combine the most advanced technical sunscreen technology with a traditional window treatment.

*Patent pending

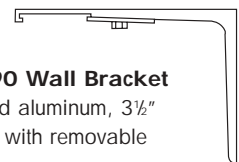

SSS•2500ZD Compact Heavy-Duty Roller Carrier System for the flat style Z Solar Drape. Will accommodate oversized requirements and can be cord-traversed or baton-drawn, as well as curved. Aluminum color standard.

SSS•2537 Snap Tab is sonically welded to sunscreen Z Solar Drape heading, forming a permanent bond. No hooks, rivets or sewing techniques are required.

SSS•2537 Snap Carriers with 1/2" wheel diameter combines ease of operation with extended service life. Z Solar Drape snaps to carrier for positive attachment.

SSS•2590 Wall Bracket of extruded aluminum, 3 1/2" projection with removable locking tab.

Flat style with minimum fullness affords a maximum vista through the Z Solar Drape.

FLAT STYLE is fabricated with a minimum fullness for a clear, unobstructed presentation. Some pleat effect is required to maintain memory when stacked in the open position.
